Saltwater Inflow & Infiltration Investigation

Ryan Radspinner

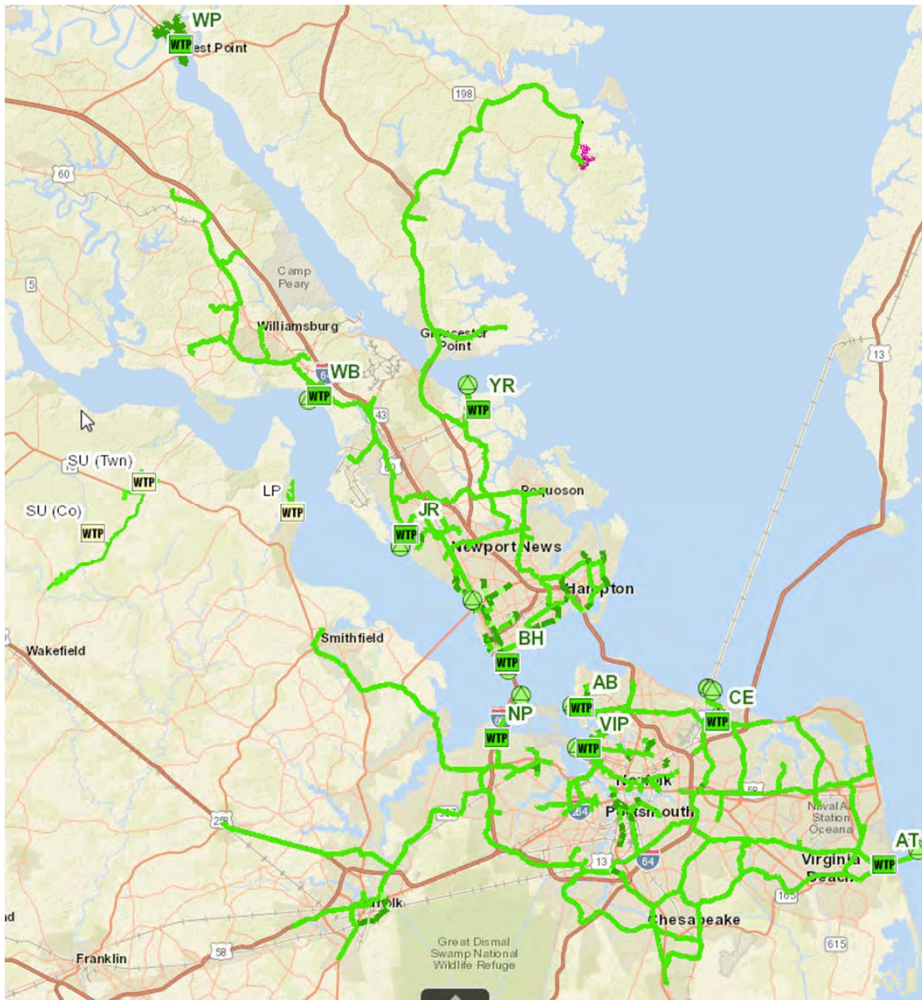

Saltwater Inflow & Infiltration Investigation

February 23rd, 2018

Ryan Radspinner, P.E.

Background

- Regional conveyance and treatment agency
- 1.6 million customers
- 18 Jurisdictions
- Low lying and flat
- Surrounded by water

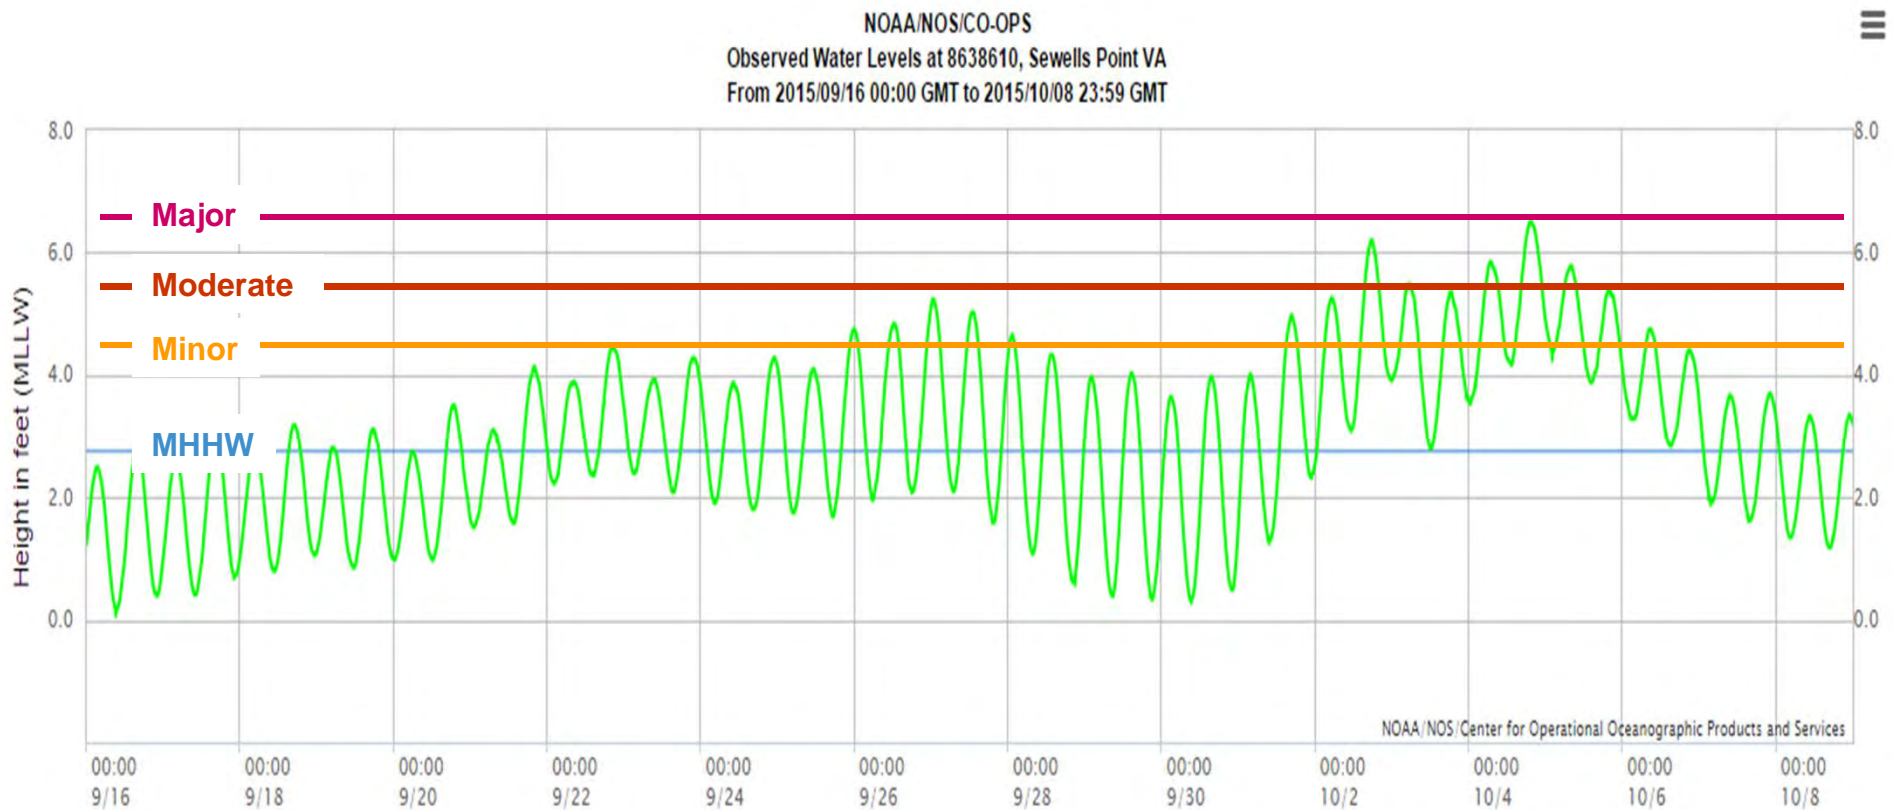

- Separate sewer system
- Consent Decree for SSOs

- Non-sewer flow (same as rainfall driven I&I)
- Salinity effect on treatment
- Aquifer recharge

Recent Events

- Nor'easter beginning late September 2015 brought elevated tides to Hampton Roads

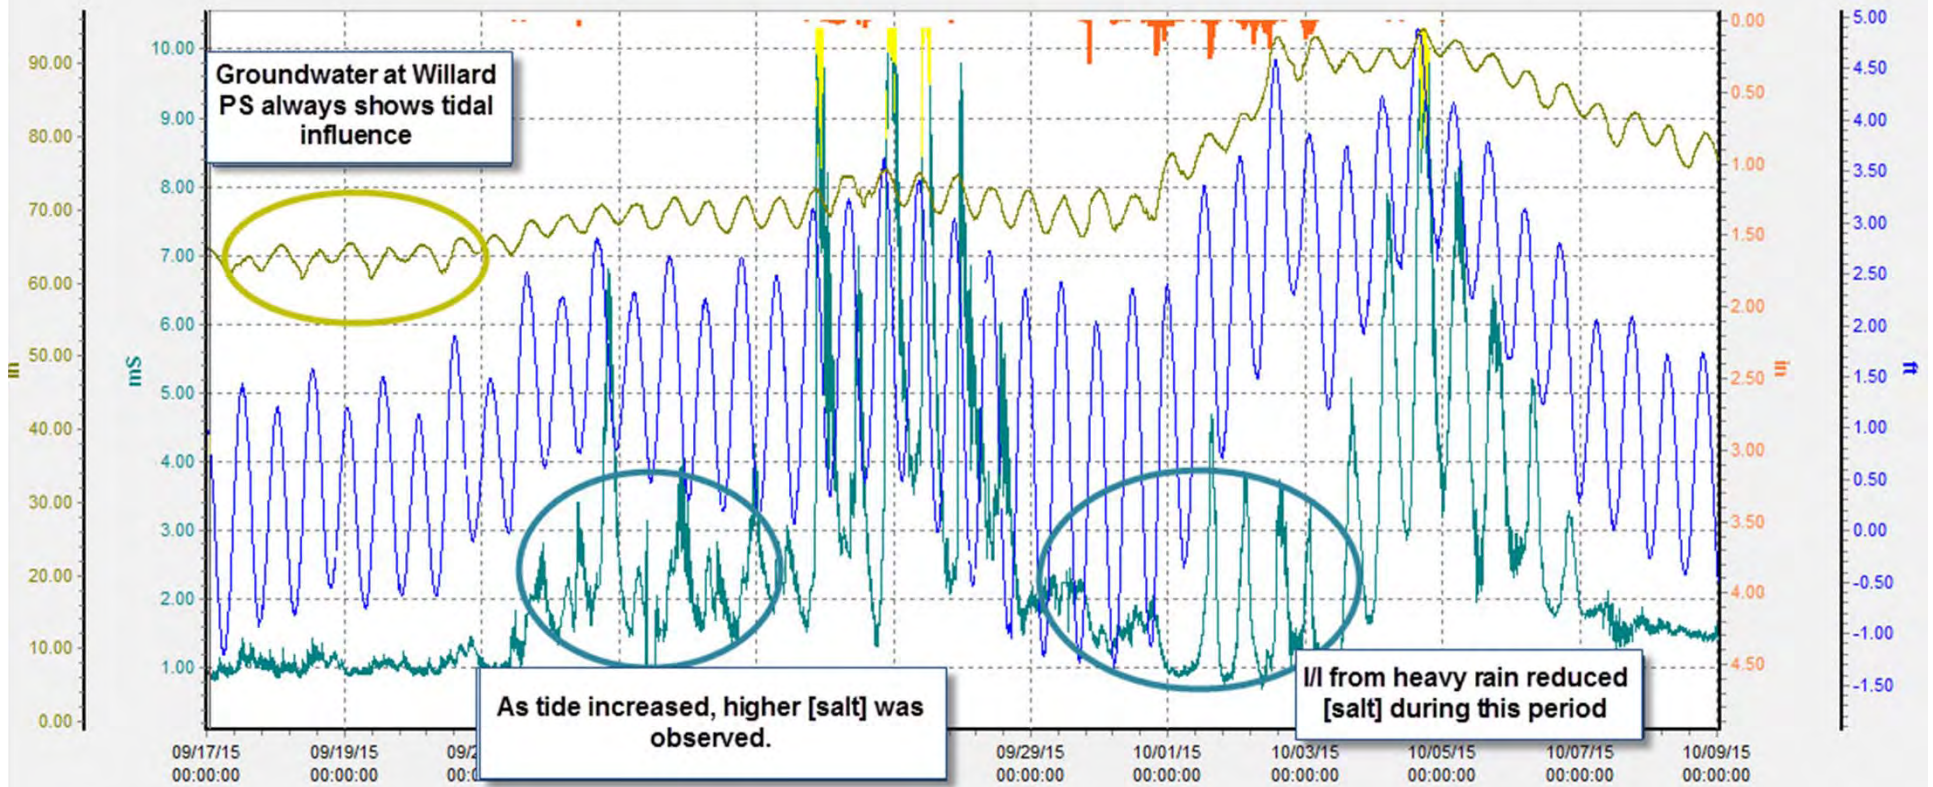

Bayshore PS

Willard Ave PS

HRSD NP - Willard Ave PS

MMPS-180 (09/17/15 to 10/09/15)

Washington Street PS

Willoughby Ave PS

Richmond Crescent PS

Step 1 - Team Formation

- Engineering
 - Hydraulics and Capacity, Data Analysis, GIS
- Operations
 - Interceptors, Treatment
- Water Quality
 - P3 (Industry), Technical Services

- Partner Jurisdictions

Step 2 – Collect Data

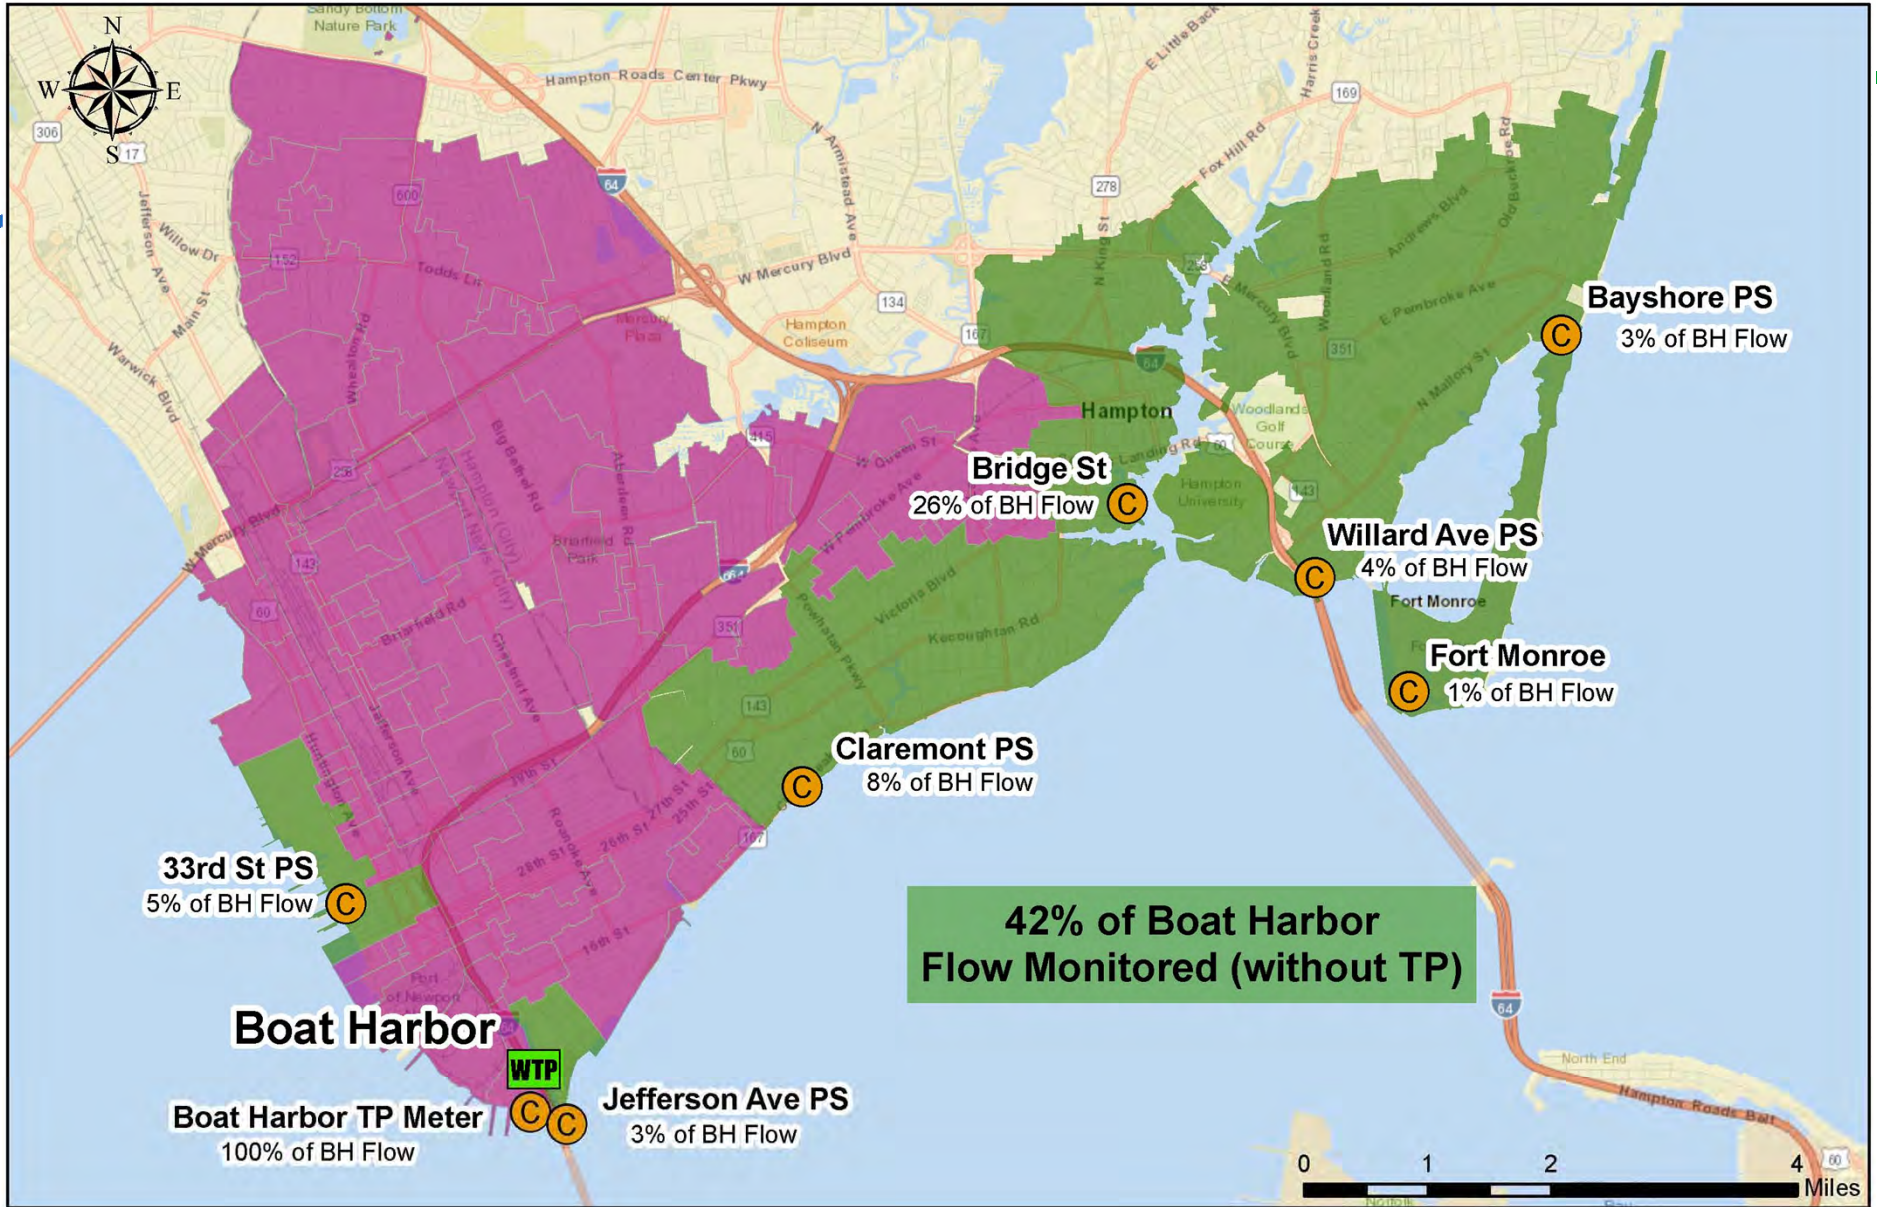

- Conductivity is more readily measured than Total Dissolved Solids (TDS)
- Drinking water 500 $\mu\text{S}/\text{cm}$
- Typical wastewater 700 $\mu\text{S}/\text{cm}$
- Bay water 30,000 $\mu\text{S}/\text{cm}$
- Ocean water 40,000 $\mu\text{S}/\text{cm}$
- Impact to treatment process $\sim 3,000 \mu\text{S}/\text{cm}$

Step 3 – Identify Thresholds

LiDAR Based Tidal Overlay

HRSD
Conductivity Monitoring for Boat Harbor Service Area

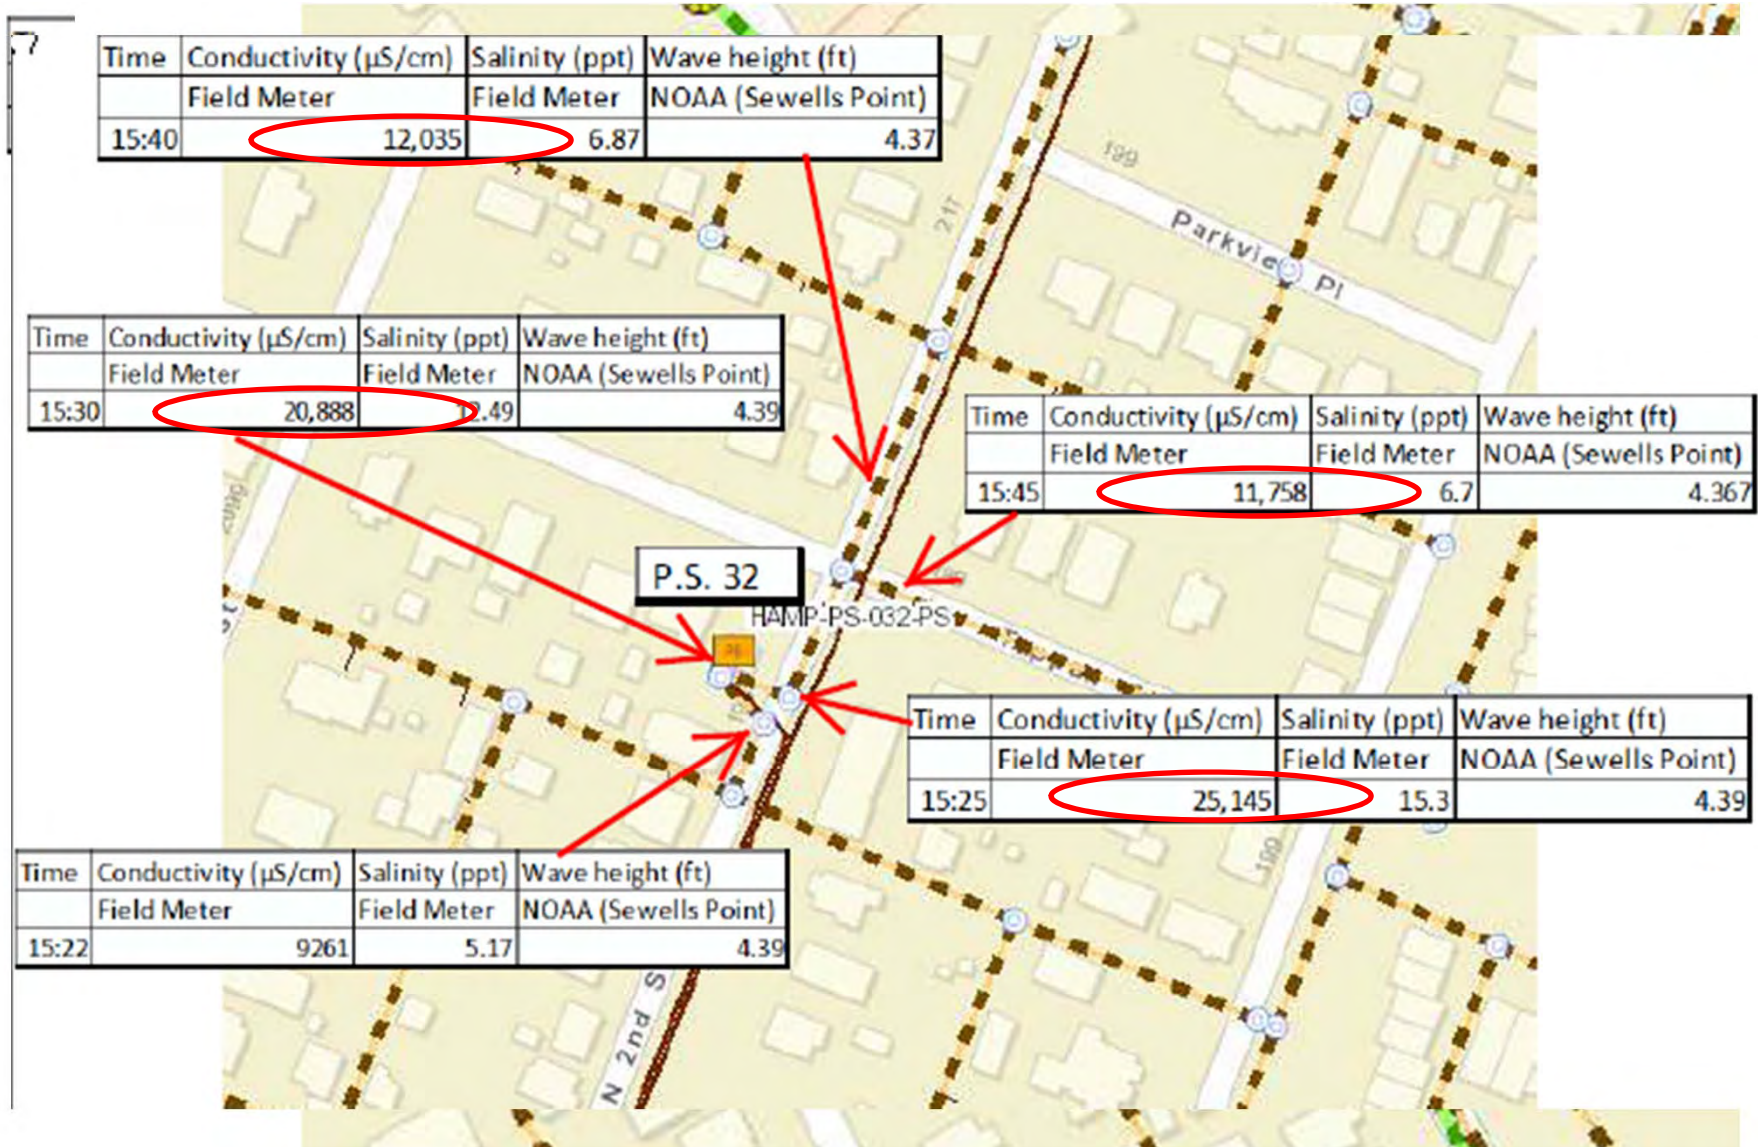

- Legend**
-  Conductivity Meters
 -  Treatment Plant
 -  Catchments Monitored by BH
 -  Catchments Monitored

Step 4 - Field Investigation

- Isolate sources by sampling upstream lift stations
- Sept. 27th high tide event
- Negligible rainfall

Field Investigation

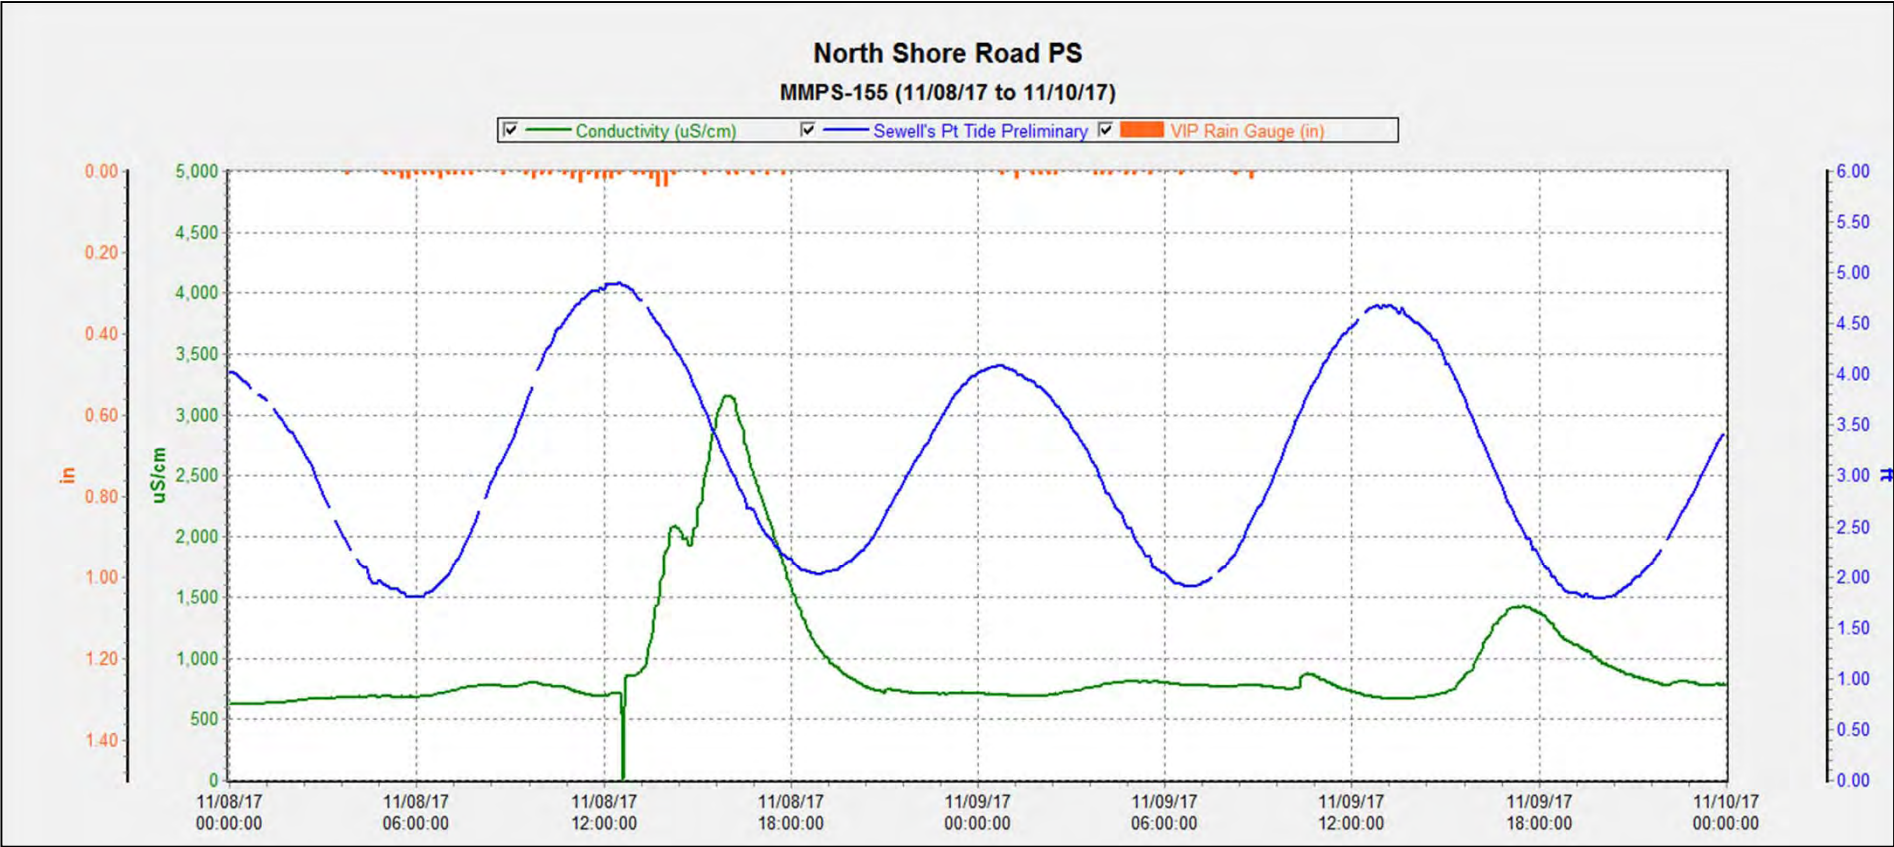

Pump Run Analysis

Hampton PS 32 Service Area

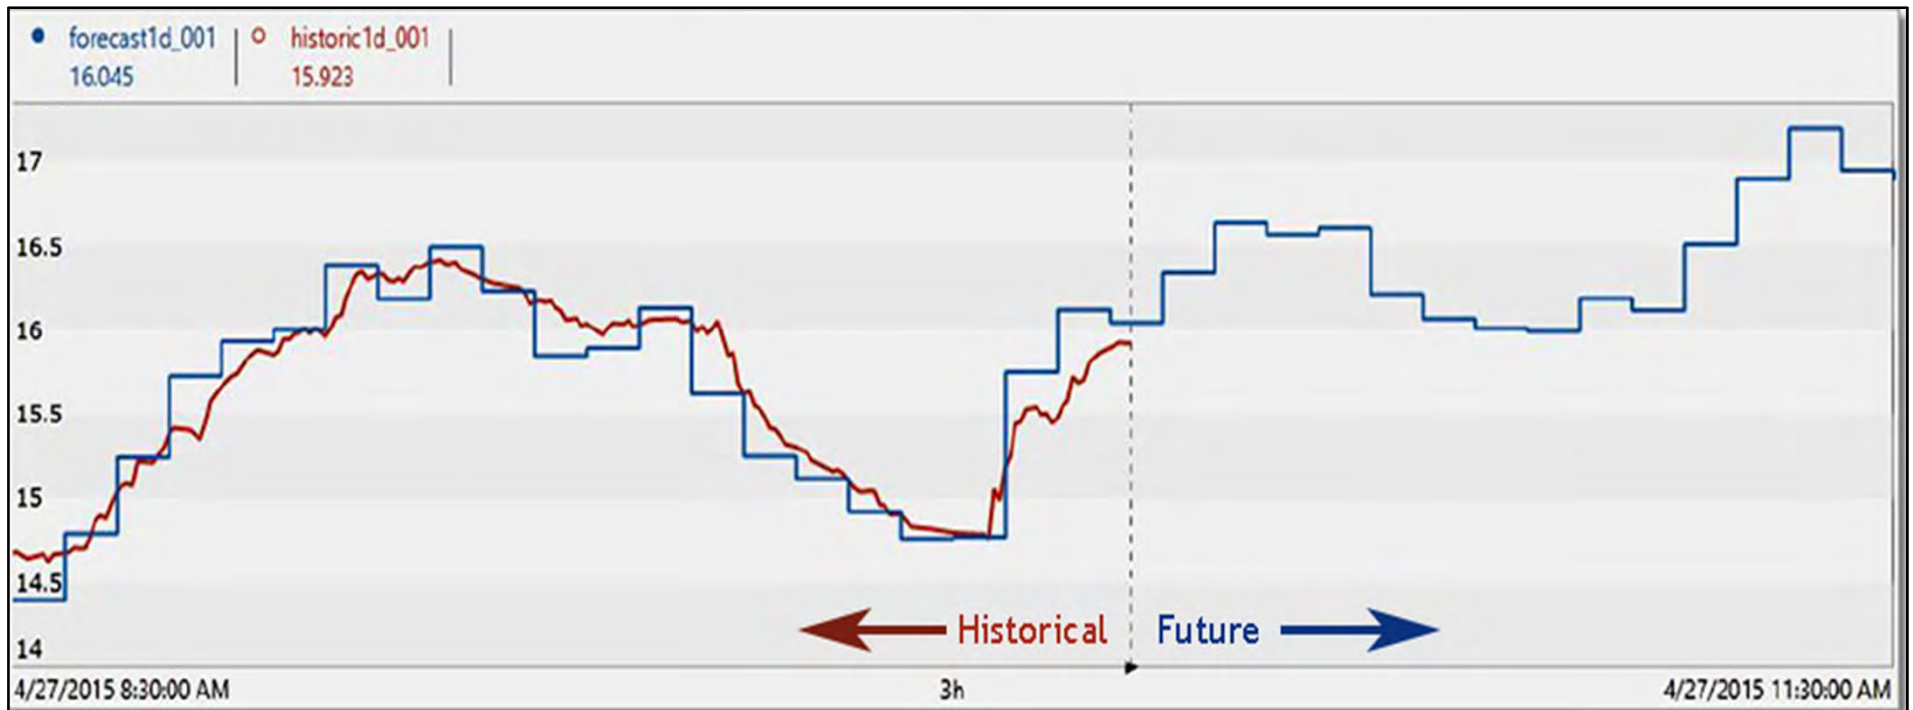

North Shore Rd

North Shore Rd

Forecasting and Alarming

- Relevant staff can be alarmed when tides are predicted above critical level

Next Steps

- Continue desktop and field investigation of vulnerable systems
- Quantify seasonal antifreeze procedures and other industrial sources
- Forecasted data, smart sewer
- Eye on sea level rise, subsidence
- Targeted asset inspections and identify rehab needs (\$)

Questions / Comments?
