

APPENDIX B – TABLE OF MECHANISMS

	Antecedents to OI		Executing OI		Consequences of OI	
	Referrals to mechanisms	Referrals to outcomes	Referrals to mechanisms	Referrals to outcomes	Referrals to mechanisms	Referrals to outcomes
Individual	<p>1.1 positive expectations</p> <p>1.2 perceived behavioral control</p> <p>1.3 entrepreneurial orientation</p> <p>1.4 strategic or long-term orientation</p> <p>1.5 patience and education</p> <p>1.6 social competence and ability to broker solutions</p>	<p>1.1 increased intention to participate</p> <p>1.2 increased expectations of result</p> <p>1.3 fertile setting for OI</p> <p>1.4 individual openness</p> <p>1.5 matter for facilitating OI in SME's</p> <p>1.6 increase in effectiveness of OI</p>	<p>1.7 informal boundary spanning</p> <p>1.8 combining external search and assimilation and utilization</p> <p>1.9 attending physical meetings</p> <p>1.10 participating in makerspaces</p> <p>1.11 master collaborative project management skills and being able to develop a technology roadmap</p>	<p>1.7 trust, understanding, and interaction</p> <p>1.8 more effective absorptive capacity and learning</p> <p>1.9 increases likelihood to receive capital investments</p> <p>1.10 increased innovation and diffusion rates</p> <p>1.11 being able to better deal with uncertainty of the market</p>	<p>1.12 working in OI teams I</p> <p>1.13 working in OI teams II</p> <p>1.14 gained trust and developed competences</p>	<p>1.12 good contacts and future OI opportunities</p> <p>1.13 absorptive capacity and managing reciprocal commitment</p> <p>1.14 career opportunities and new opportunities for OI</p>
Project	<p>2.1 importance of project for underlying firms</p> <p>2.2 close relation of project's task to firm's main business</p> <p>2.3 uncertainty of technology or market dynamics</p> <p>2.4 firm strategy based on internal competences</p> <p>2.5 formal contractual governance style</p> <p>2.6 informal self-enforcing governance style</p> <p>2.7 split project management from R&D management</p> <p>2.8 team size</p> <p>2.9 short learning distance for project teams</p> <p>2.10 team demographic variance and partner breadth</p>	<p>2.1 increases willingness to outbound share knowledge</p> <p>2.2 increases level of inbound openness</p> <p>2.3 increases level of inbound openness</p> <p>2.4 OI is not the best approach for an R&D project</p> <p>2.5 beneficial for market-focused OI projects</p> <p>2.6 beneficial for science-focused OI projects</p> <p>2.7 allows experts to add value to R&D</p> <p>2.8 inverted U-shape with inbound openness</p> <p>2.9 less inbound openness, more outbound openness</p> <p>2.10 interorganizational project team success</p>	<p>2.11 collaborative prototyping</p> <p>2.12 using possibilities of virtual world</p> <p>2.13 taking care of dynamics and risk</p> <p>2.14 too much dynamics</p> <p>2.15 decisionmaker's positive attitude</p> <p>2.16 distributed attention for managing internal and external knowledge</p> <p>2.17 NIH syndrome</p>	<p>2.11 increases engagement of various stakeholders</p> <p>2.12 overcoming problems in the 'real world'</p> <p>2.13 positive influence on project success</p> <p>2.14 decreased openness by NIH and NSH syndromes</p> <p>2.15 positive influence on project performance</p> <p>2.16 negative influence on project performance</p> <p>2.17 lower project success</p>	<p>2.18 strategic importance of project team's task</p> <p>2.19 connecting to project network organizations</p> <p>2.20 reliance on extramural R&D</p> <p>2.21 presence of patents</p> <p>2.22 collaboration contracts</p> <p>2.23 open collaborative project approach</p>	<p>2.18 project team's engagement in inbound OI</p> <p>2.19 adaptability and effectiveness</p> <p>2.20 ∩-relation with innovation performance</p> <p>2.21 new entrant's average number of OI relationships</p> <p>2.22 no effective governance mechanism against imitation</p> <p>2.23 higher cost, worse timing but better product performance</p>
Firm	<p>3.1 integrated standardization strategy</p> <p>3.2 policy of collaborating with universities</p> <p>3.3 specialized structures</p> <p>3.4 dedicated/independent R&D unit</p> <p>3.5 openness</p> <p>3.6 opening resources (knowledge and experts)</p> <p>3.7 leadership encouraging knowledge crossing organizational boundaries</p>	<p>3.1 knowledge transfer and creativity</p> <p>3.2 identifying novel technological opportunities</p> <p>3.3 positive outcomes of innovation efforts</p> <p>3.4 successful inbound OI</p> <p>3.5 ∩-relation with ideas being implemented</p> <p>3.6 weakening competitors while increasing demand</p> <p>3.7 firms being more likely to use OI</p>	<p>3.11 technology roadmapping</p> <p>3.12 building technology foresight by scouting (depth)</p> <p>3.13 working in parallel teams with the same project leader</p> <p>3.14 using specialist knowledge providers</p> <p>3.15 acquire knowledge by take-overs</p> <p>3.16 geographic dispersion of resources after an acquisition</p> <p>3.17 working with RTOs rather than with universities</p>	<p>3.11 OI performance (especially technology push)</p> <p>3.12 incrementally improving products</p> <p>3.13 performance in costs, creativity and speed</p> <p>3.14 strengthens the impact of inbound OI</p> <p>3.15 strengthens the impact of OI</p> <p>3.16 ∩-relation with success of knowledge acquisition</p> <p>3.17 more new-to-the-firm but less new-to-the-market innovations</p>	<p>3.19 licensing technologies</p> <p>3.20 impact of abandoning innovation activities</p> <p>3.21 experience with out-licensing</p> <p>3.22 having extensive in-licensing experience</p> <p>3.23 social status and number of prior commercial alliances</p> <p>3.24 firms lacking absorptive capacity</p> <p>3.25 developing products with other firms</p> <p>3.26 performing OI</p>	<p>3.19 strong increase in valuation</p> <p>3.20 positive effect on overall innovation performance</p> <p>3.21 increases firm revenues and value of its product base</p> <p>3.22 increases firm revenues and value of its product base</p> <p>3.23 increases firm revenues and value of its product base</p> <p>3.24 distributed knowledge capturing, transformation and exploitation</p> <p>3.25 competitiveness of product portfolio and novelty</p> <p>3.26 developing absorptive and desorptive capacities</p>

Firm	<p>3.8 recognition of intra-organizational forces</p> <p>3.9 impediments in internal innovation activities</p> <p>3.10 presence of OI champion, technology gatekeeper, and shepherds</p>	<p>3.8 firms being more likely to use OI</p> <p>3.9 firms being more likely to use OI</p> <p>3.10 positive effects on OI success</p>	<p>3.18 strategic venturing model, retaining a significant stake in the future business</p>	<p>3.18 easier to get access to (knowledge of) external experienced entrepreneurs</p>	<p>3.27 buying and selling knowledge</p> <p>3.28 openness in product development</p> <p>3.29 openness (both inbound and outbound)</p> <p>3.30 creative destruction and appropriation of complementary assets</p> <p>3.31 relative absorptive capacity</p>	<p>3.27 increases firm sales of new products and R&D costs</p> <p>3.28 increases innovative sales and provides learning effects</p> <p>3.29 higher transaction costs, especially for small firms</p> <p>3.30 creative appropriation</p> <p>3.31 benefit more from NPD than the other firm</p>
Network	<p>4.1 shift from project-based firms to project network organizations</p> <p>4.2 innovation intermediary with moderate stratification</p> <p>4.3 knowledge transfer office</p> <p>4.4 mediated revealing and multiple innovation goals</p> <p>4.5 complementary and substitute appropriability regimes</p> <p>4.6 multi-partner consortia and networks</p> <p>4.7 stronger ties and a more closed network model</p> <p>4.8 weaker ties and a more open network model</p> <p>4.9 installing an open funding platform</p> <p>4.10 teambuilding and building on existing capabilities</p> <p>4.11 preference of university research over company R&D</p>	<p>4.1 connect individuals and organizations</p> <p>4.2 benefits OI performance</p> <p>4.3 triggering OI, increasing attractiveness for scientists</p> <p>4.4 minimizing adverse competitive consequences</p> <p>4.5 basis for knowledge sharing in networks, helping to build long term relations</p> <p>4.6 act as boundary organization, triggering OI</p> <p>4.7 successful OI in networks focusing on exploitation</p> <p>4.8 successful OI in networks focusing on exploration</p> <p>4.9 increases funding capacity</p> <p>4.10 more stable teams and collaboration</p> <p>4.11 better OI performance</p>	<p>4.12 joint programs in itself</p> <p>4.13 presence of boundary spanners (technological areas)</p> <p>4.14 presence of social brokers (linking disconnected actors)</p> <p>4.15 presence of technology scouts</p> <p>4.16 identifying type of network</p> <p>4.17 identification of development phases</p> <p>4.18 availability of network-level funding</p> <p>4.19 network orchestration and installing network boards</p> <p>4.20 complex interactions between network partners</p> <p>4.21 presence of corporate venture capital</p> <p>4.22 hub firm orchestrating its relationships with different ecosystem actors</p>	<p>4.12 better access to funding</p> <p>4.13 contribute by enhancing knowledge distribution</p> <p>4.14 contribute by enhancing knowledge distribution</p> <p>4.15 identify discontinuous technological change</p> <p>4.16 less uncertainty and smaller range in expectations</p> <p>4.17 of network development dynamics</p> <p>4.18 presence of required roles leading to better results on mobility, R&D and commercialization</p> <p>4.19 facilitate proper and timely decision-making</p> <p>4.20 higher transaction costs</p> <p>4.21 help overcome these costs</p> <p>4.22 removing technological bottlenecks externally deploying novel technologies</p>	<p>4.23 contact with and long-term bonding of suppliers, clients and users</p> <p>4.24 existence of innovation networks</p> <p>4.25 combined space for externally-oriented organizational practices</p> <p>4.26 using Wikipedia hyperlinks to extend previous ex post evaluations</p>	<p>4.23 easier and more flexible access to technologies</p> <p>4.24 speed, flexibility, and adjustment to changing market conditions</p> <p>4.25 enhances trust to grow between innovative experts</p> <p>4.26 predicting future technology convergence</p>
Society	<p>5.1 market uncertainty</p> <p>5.2 economic downturn</p> <p>5.3 strength of competition and openness of networks</p> <p>5.4 social and environmental pressures</p> <p>5.5 regional knowledge endowment</p> <p>5.6 well-functioning regional technology networks</p> <p>5.7 public policies or legislation promoting OI</p> <p>5.8 strengthening competition, increase knowledge diffusion</p> <p>5.9 developing innovation policies at the national level</p>	<p>5.1 increases willingness OI</p> <p>5.2 increases necessity to invest in (open) innovation</p> <p>5.3 positively influences innovation performance</p> <p>5.4 one of primary drivers for adopting OI</p> <p>5.5 positively influences OI results</p> <p>5.6 stimulators for OI practices and innovation success</p> <p>5.7 improve number of external collaboration partners</p> <p>5.8 positively influences OI results</p> <p>5.9 facilitating a positive innovation climate</p>	<p>5.10 non-monetary versus monetary public support</p> <p>5.11 public policies aimed at increasing openness among local economic actors and institutions</p> <p>5.12 regions having developed industrial clusters</p>	<p>5.10 non-monetary public support has larger impact on innovation performance</p> <p>5.11 transition of a region into an ORIS significantly influencing inhabiting firm's innovation performance</p> <p>5.12 meaningful loci of innovation</p>	<p>5.13 government support</p> <p>5.14 government bearing part of the risk for early-stage technologies</p> <p>5.15 direct public financial support</p> <p>5.16 open access to government knowledge and data</p> <p>5.17 good functioning networks in a region</p> <p>5.18 positive externalities (knowledge diffusion and endowment) in a region</p> <p>5.19 promotion of OI practices through networks</p>	<p>5.13 reduction of network failures</p> <p>5.14 access to public funding will reduce price for private investors</p> <p>5.15 crowding out effects for R&D investment</p> <p>5.16 creation of new (social) service offerings</p> <p>5.17 firms in the region get easier access to knowledge</p> <p>5.18 NPD performance of firms present in the region</p> <p>5.19 positive externalities (knowledge diffusion and endowment)</p>
